ACRONYMS, SYMBOLS AND ABBREVIATIONS

A=antenna capture Area	drift _h =measured horizontal drift
a=local speed of sound	drift _v =measured vertical drift
ACM=Air Combat Maneuvering	ECM=Electronic Counter Measures
ACP=Armament Control Panel	EHF=Extremely High Frequency
AGARD=Advisory Group for Aerospace Research and Development	EO=Electro-Optical
AGL=Above Ground Level	ESM=Electronic Support Measures
ALT=Altitude to begin air-to-ground resolution array test run	EW=Electronic Warfare
AMTI=Airborne Moving Target Indicator	f=frequency in hertz
avg _{lat} =average of the latitude of two radar targets	FCS=Fire Control Set
BIT=Built In Test	f _{dt} =doppler shift due to target radial velocity
B _n =noise band width	FL _c =focal length of the collimator (folded path length from target to mirror)
B _{scan deg} =angular width of the B scan display in degrees	FLIR=Forward Looking Infrared Radar
B _{scan in} =linear width of the B scan display in inches	FM=Frequency Modulation
CAD=Cartridge Activated Device	F _n =noise figure
CAP=Combat Air Patrol	F ₀ =transmitted carrier frequency
CPA=Closest Point of Approach	FRL=Fuselage Reference Line
C=speed of light	ft=feet
CRT=Cathode Ray Tube	g=acceleration due to Gravity
db=decibel	G=directive gain of the antenna
DBS=Doppler Beam Sharpening	GDOP=Geometric Dilution Of Precision
DDL=Dispersive Delay Line	GHZ=Gigahertz
deg=degree	GPS=Global Positioning System
DEP=Design Eye Position	h=horizontal measurement of FLIR IFOV projected onto wall
DLC=Delay Line Canceler	H=altitude above the terrain in feet
DME=Distance Measuring Equipment	HF=High Frequency
DOD=Department of Defense	HOTAS=Hands On Throttle And Stick
DR=Dead Reckoning	h _{pc} =calibrated pressure altitude
drift _{ah} =measured angular horizontal drift	HPD=Probability of Detection
drift _{av} =measured angular vertical drift	h _{pi} =indicated pressure altitude
	h _{po} =observed pressure altitude

HUD=Head Up Display	$M_{bearing}$ =actual magnetic bearing from the flyover point to the radar target
HZ=hertz	MHz=megahertz
IFF=Interrogator Friend or Foe	MIN=MINutes
IFOV=Instantaneous Field Of View	MRAT=Minimum Resolvable differential Temperature
IFOV _h =Instantaneous Field Of View horizontal dimension	MSL=Mean Sea Level
IFOV _v =Instantaneous Field of View vertical dimension	M_t =true Mach number
IFR=Instrument Flight Rules	NFOV=Narrow Field Of View
IMC=Instrument Meteorological Conditions	nm=nautical mile
in=inch	NOTCH _{deg} =angular width of the DBS notch
INS=Inertial Navigation System	NOTCH _{in} =linear width of the DBS notch on the B-scan display
IR=InfraRed	OAT _i =indicated Outside Air Temperature
k=Boltzman's constant	OAT _o =observed Outside Air Temperature
KHZ=Kilohertz	P=transmitted power of the radar
KIAS=Knots Indicated AirSpeed	PAL=Positive Arm Latch
KOAS=Knots Observed AirSpeed	PCA=Polar Cap Attenuation
KW=Kilowatt	PD=Probability of Detection
l=distance from FLIR aperture to crosshair intersection mark	PMA=Program Manager for Aviation
l=distance to initial crosshair position for line of sight drift rate testing	PIREP=Pilot REPort of the weather
L=receiver loss factor	PPI=Planned Position Indicator
LASER=Light Amplification through Stimulated Emission of Radiation	PPS=Pulses Per Second
LED=Light Emitting Diode	P_{rep} =the TACAN derived range from the beginning of the peak of the sawtooth
LF=Low Frequency	PRF=Pulse Repetition Frequency
LORAN=Long Range Navigation	PRI=Pulse Repetition Interval
LAT=the numerical average of the latitude of the two surveyed points	PW=Pulse Width
lb _f =pounds force	R=gas constant for air, 53.35 (ft)(lb _f)/(lb _m)(°R)
lb _m =pounds mass	rad=radians
m=meter	Radar=Radio Detection and Ranging
M=Mach number	R _b =target range at breakout
MC=Mission Computer	RF=Radio Frequency
MF=Medium Frequency	R _{horizon} =radar horizon
	r=angular resolution of the FLIR

rms=root meas square
 R_{max} =maximum radar range
 $R_{max\ unamb}$ =theoretical unambiguous maximum range
 R_{min} =theoretical minimum range
 $R_{min\ res}$ =theoretical minimum range resolution
 R_{rep} =the TACAN derived range from the beginning of the peak of the sawtooth
 R_s =response of scanning FLIR
 R_t =Range from the target
 R_{target} =radar derived range to the targets
 $R_{test\ begin}$ =minimum range between test airplane and target for azimuth resolution testing
 RAT=Resolvable differential Temperature
 S=across azimuth target Separation
 SA=Selective Availability
 SA=Situational Awareness
 SEP=Spherical Error Probable
 SF_{∞} =cutoff Spatial Frequency
 SF_{∞} = SF_{∞} airborne
 SF_{∞} = SF_{∞} ground
 SF_t =Spatial Frequency of the Target
 SHF=Super High Frequency
 SID=Sudden Ionospheric Disturbance
 SMP=Stores Management Processor
 SMS=Stores Management Set
 S/N=Signal to Noise ratio
 $(S/N)_{min}$ =minimum signal to noise ratio
 STT=Single Target Track
 T=absolute temperature
 t_a =ambient temperature
 TACAN=Tactical Air Navigation
 $T_{bearing}$ =actual true bearing from the flyover point to the radar target

TEMP=Test and Evaluation Master Plan
 TPC=Tactical Pilotage Chart
 TWS=Track While Scan
 UHF=Ultra High Frequency
 v=vertical dimension of IFOV projected onto wall
 V=magnetic variation
 V&V=Validation and Verification
 V_c =calibrated airspeed
 V_i =indicated airspeed
 VHF=Very High Frequency
 VID=Visual Identification
 VMC=Visual Meteorological Conditions
 VLF=Very Low Frequency
 V_o =observed airspeed
 VS=Velocity Search
 V_t =true airspeed
 W=Watt
 WP=WayPoint
 W_{ic} =Width of one bar and one space in target template
 WFOV=Wide Field Of View
 Δ_{res} =measured angular resolution of the radar
 Δh_{pic} =pressure altitude instrument correction
 Δh_{pos} =pressure altitude position error correction
 Δ_{Lat} =the difference between the latitude of the surveyed points in degrees
 Δ_{Long} =the difference between the longitude of the surveyed points in degrees
 Δnm =the difference in nautical miles between the surveyed points along the true north-south or east-west axis
 ΔOAT_{ic} =Outside Air Temperature instrument correction
 Δres =measured angular resolution

ΔT =temperature differential

ΔV_{ic} =airspeed instrument error correction

ΔV_{pos} =airspeed position error correction

γ =ratio of specific heats, 1.4

γ =aircraft flight path angle

λ =wavelength

μ =microns

μsec =microsecond

σ =radar cross section

σ_{desired} =desired radar cross section

σ_{test} =test target radar cross section

θ =test radar advertised antenna beam width

° =degrees

° R=degrees Rankine
